 8048 Zurich  
 Switzerland
**Area:**approx. 500 m<sup>2</sup>**Completion date:**

31.10.2018

**Duration:**

13 months

## Extra ATTICO® storey on Kirchenweg in Zurich

Häring AG built five loft apartments (with either one or two bedrooms and a balcony, ranging from 75 to 124 m<sup>2</sup>) on top of an existing office building on Kirchenweg. The location cried out for high-standard specifications. The large amount of floor-to-ceiling glazing enables the generously dimensioned outer rooms to be lit by carefully located skylights. Some of the barrier-free flats have two spacious bathrooms. The new top floor's skeleton structure distributes loads onto the existing concrete columns. The building shell is a prefabricated timber structure. As the add-on timber elements were relatively lightweight, no reinforcements were required to the existing structure.
